Perfect Fit

Silicone Extended Connect® Pediatric & Neonatal Tracheostomy Tubes

Arcadia Medical's Perfect Fit Extended Connect Pediatric and Neonatal Tracheostomy Tubes provide unique design solutions specifically for the special needs of the pediatric and neonatal patient. The Perfect Fit neck flange is ideal for patients with a minimal chin to stoma distance often found in undeveloped necks. The Perfect Fit's flange design helps to prevent riding up of the cannula and minimizes side-to-side cannula movements as well. The angle of the Perfect Fit Tracheostomy Tube offers a truly better, more comfortable fit for the pediatric and neonatal patient. The Extended Connect feature further enhances patient comfort and mobility by extending the connection away from the chin to help prevent abrasion. Extended Connect also protects against tube occlusion associated with flexing of the head and neck. Perfect Fit products are all latex free, made from soft, flexible, biocompatible silicone to help protect the sensitive airway of pediatric and neonatal patients. Wire reinforcement along the entire tube length offers kink resistant airway management.

357 025	2.5	2.5	4.0	15	30
357 030	3.0	3.0	4.7	17	32
357 035	3.5	3.5	5.3	20	34
357 040	4.0	4.0	6.0	22	36

Low Profile (LP) Cuff Extended Connect Pediatric & Neonatal Tracheostomy Tubes

These cuffed tracheostomy tubes combine the many unique features of the LP Cuff Pediatric and Neonatal Tracheostomy Tubes with the Extended Connect features in a cuffed design. Perfect Fit LP cuff tracheostomy tubes have a low profile silicone cuff that fits flat against the tube shaft when deflated. The product is ideal for ventilator support to prevent leaks during positive pressure ventilation (high PEEP or PEAK pressure). The cuff should be inflated with sterile liquid (saline or water) to create a tracheal seal to prevent leaks and aspiration. Packaged individually sterile with obturator, twill tie and disconnect wedge.

LP Cuff Extended Connect® Pediatric Tracheostomy Tubes
